

PHOBI

TECHNICAL DATA SHEET

PHOBI CYPRABIO CAPS

MICRO-CAPSULATED INSECTICIDE AGAINST
CRAWLING & FLYING INSECTS

PROFESSIONAL USE ONLY

Composition

Cypermethrin (CAS No. 52315-07-8)	100g/L
Prallethrin (CAS No. 23031-36-9)	5g/L

Presentation

Micro-capsulated insecticide against crawling & flying insects such as cockroaches, bed bugs, ants, flies and mosquitoes. Prallethrin gives the product a shock effect. The microencapsulation of Cypermethrin ensures the stability of the substance to light, temperature and humidity. Thanks to the different sizes of capsules, the release of cypermethrin is regular and continuous.

Strengths

- Shock effect, residual effect & continuous release
- Odorless and does not stain
- Active on porous and non-porous surfaces

Action

Shock effect and residual effect. After the treatment, the treated surface is covered with thousands of microcapsules. PHOBI CYPRABIO CAPS works in less than 15 minutes and protects treated surfaces up to 12 weeks. Do not reprocess until there is a new infestation.

Application and dose

In order to preserve the capsules, remove the filters present in the nozzle and use a sprayer with a maximum pressure of 3 bars.

Dose of employment for a 100m² treatment: Dilute 50 mL of product in 5 L of water.

Shake the product before dilution.

- In order to preserve the capsules, remove the filters present in the nozzle of the sprayer.
- Spray 1L of diluted solution over 20m² or 20 linear meters.
- After treatment, the water evaporates leaving the microcapsules available on the surfaces.
- Indoors, ventilate for the duration of the treatment and ventilate thoroughly before reoccupying the premises (on average 30 minutes to 2 hours depending on the level of ventilation)
- Clean the equipment used after use.
- Rinse the equipment with water after each use.
- It is advisable to wear gloves and wash your hands after each manipulation
